DESIGNED WATER RESISTANCE

Good design is everlasting. It is not a fad. It is not susceptible to passing time. Knowing that everything changes – “everything flows” – we wanted to create a product which, while accompanying us in everyday life and giving us the joy of contact with perfect form, will be resistant to the passage of time. Its timelessness is not only the art of design, multidimensionality, but it is encoded in its functionality. Therefore, using the most modern available technologies, we have created a product with the highest level of water resistance. We can confirm that if you have ARTEO panels and a situation where “everything flows” happens, it does not affect them.

We have just designed them that way!

LLT | anti scratch **LLT** | anti static

OUR SYSTEM IS

MEGA!

megaloc
aqua protect

MEGA WATER RESISTANCE

We have improved our **innovative panel joining system**. Keeping its simplicity and speed of installation, we have focused on making it an effective barrier against flooding. Additionally, we have modified other elements of our panels. Thanks to this, we have achieved a mega-effective **48 or 72-hour water resistance**, confirmed in the most reliable and demanding tests carried out according to the **NALFA** (North American Laminate Flooring Association) guidelines. ARTEO floors with the **megaloc aqua protect** system pass all tests with flying colours. **ARTEO is proven water resistance.**

EFFECTIVE BARRIER AGAINST WATER

Spilled water? Splashes during everyday activities? With ARTEO flooring, that's no issue. Thanks to enhanced water resistance, your floor stays protected even in challenging everyday situations. From kitchens and dining areas to living rooms - ARTEO retains its beauty and durability, even under heavy, daily use.

By choosing **ARTEO**, you benefit from innovative Megaloc Aqua Protect technology, forming a reliable barrier that seals and protects the panel edges.

MEETING WITH ART

Art is interaction. It's emotions. It includes movement, unity, variety, balance, contrast, and proportions. The texture, form, shape and colour create a unique pattern of the work. Each ARTEO product is created with attention to the smallest detail. At ARTEO, we design according to the principles of applied art and we do not forget that functionality is of paramount importance over originality, creativity and beauty. We have managed to connect these two worlds. That is why each interior with **ARTEO** becomes unique in expression and brings out individual features, characteristic only for this place.

That's what art is. That's what ARTEO is.

JEWEL CHANGI AIRPORT

A miracle of contemporary architecture with Nature as its leitmotif. The focal point of the Jewel is the world's tallest indoor waterfall – Rain Vortex - surrounded by terraced forest. The entire complex is the result of a collaboration between engineers and architects, led by Moshe Safdie, who described the project in the following way: "The component of the traditional mall is combined with the experience of nature, culture, education and recreation, aiming to provide an uplifting experience."

TBILISI BRIDGE OF PEACE

The bridge over the Kura River in the centre of Tbilisi. Since its opening in 2010, it has been a tourist attraction and one of the most recognizable points of the city. It is an architectural gem. It is a transparent glass and steel structure that resembles a huge fishing net stretched across the river. Designed and made in Italy by Michele De Lucchi, this 156-meter-long arch bridge was brought to Georgia from Italy in a disassembled form of 200 elements.

WATERFALL IN DUBAI MALL

Beauty and artistry. Spectacular art installation. It attracts attention. The rhythmic flow of water creates the illusion of movement of the characters, and the huge windows of the centre create a unique play of light. Designed by Singaporean architects, it proves that there is a place for art not only in museums.

SYDNEY OPERA HOUSE

One of the most recognizable buildings in the world. The symbol of Sydney. Designed in the style of modern expressionism by Jørn Utzon, the building is admired to this day, it is an icon of contemporary architecture. The body of the opera has taken shapes previously not known in architecture. At the time of its creation, and also today, it is a symbol of an innovative approach to design. Architecture is an art.

WATER RESISTANT FINISH

The design of the Prestige skirting board, proven and appreciated by our customers, has become the basis for the new collection of 80th skirting boards, dedicated to ARTEO water resistant floors.

The collection is made of HDF with increased resistance to moisture, and its stability is due to high density and the highest production standards.

80th skirting boards are made of raw materials from controlled sources, and they are also manufactured in a technology that is safe for the environment. An additional advantage is very low formaldehyde emission.
